**(5950) Leukippos = 1986 PS<sub>4</sub>**

Discovered 1986 Aug. 9 by E. W. Elst and V. Ivanova at the National Bulgarian Observatory.

Named for the great Greek philosopher Leukippos, born around 450 B.C., probably at Miletus, on the west coast of Asia Minor. His main concern was to harmonize Ionic cosmology with Greek ontology. Although it was Demokritos who brilliantly elaborated many of his ideas, the atomistic theory of matter originated with Leukippos. Only a few fragments of his work remain, and these show that he made a clear distinction between empty space and matter.

**(6006) Anaximandros = 1989 GB<sub>4</sub>**

Discovered 1989 Apr. 3 by E. W. Elst at the European Southern Observatory.

Named for the great Greek philosopher Anaximander of Miletus (610–546 B.C.). A pupil of Thales, he wrote treatises on geography, astronomy and cosmology. From all this only the so-called B1 fragment remains. Although it barely embraces nine sentences, it may be considered as the oldest philosophical citation. Anaximander derived the world from the *apeiron* (unlimited), which is the *arche* (beginning) and principal element, from which all existing things owe their birth and to which they will eventually return. Although a rationalist, he described the emergence of particular substances in metaphors, drawn from human society, in which physical injustices (hot or cold may not prevail forever) are penalized.

**(6026) Xenophanes = 1993 BA<sub>8</sub>**

Discovered 1993 Jan. 23 by E. W. Elst at the European Southern Observatory.

Named for the Greek philosopher Xenophanes of Colophon (570–475 B.C.). He was in the first place a poet, using poetry to express his reflections about philosophical problems. Although he continued the tradition of Ionic philosophy (e.g., on nature), he spent much of his time attacking the idea of anthropomorphic gods, such as we know them from the work of Homer and Hesiod. From this the idea of a more abstract god, in combination with ethical principles, has been evolved. Much later, Plato took up this picture. However, the great achievement of Xenophanes remains his introduction of reflection on knowledge into philosophy.

**(6039) Parmenides = 1989 RS**

Discovered 1989 Sept. 3 by E. W. Elst at Haute Provence.

Named for Parmenides of Elea, born around 515 B.C. and the founder of “Eleaticism”. From his lengthy poem *On Nature*, a hexametric work of which only a small part has been preserved, one learns that he considered the plurality of things as the appearance of only one eternal reality. Greek philosophers before him, such as Thales and Anaximenes, tried to explain the physical world by means of sometimes very remarkable hypotheses. Parmenides, probably influenced by the skeptical Xenophanes, wanted to be absolutely certain about the theory he put forward. He therefore investigated the validity of theories, not by experiments, but by means of the logical soundness of laws and concepts that had been incorporated.

**(6051) Anaximenes = 1992 BX<sub>1</sub>**

Discovered 1992 Jan. 30 by E. W. Elst at the European Southern Observatory.

Named for the great Greek philosopher Anaximenes of Miletus. He was born in 545 B.C. and is to be considered, with Thales and Anaximander, one of the three first philosophers in the western world. His principal element was “aer” (vapor, air), from which the various types of matter can be derived by condensation. His thought is typical of the transition from mythology to science. However, he was not completely liberated from mystical tendencies (orphism), since he believed that there is a kind of overarching principle between microcosmos and macrocosmos.

**(6068) Brandenburg = 1990 TJ<sub>2</sub>**

Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

Brandenburg is a region with many lakes, waterways and pine forests. The poets Th. Fontane and H. von Kleist, the scientist W. von Humboldt and the architect K. Fr. Schinkel were all born in the region. Six well-known compositions by J. S. Bach have the title *Brandenburgische Konzerte*. Name proposed by the first discoverer.

The name “Rheinland” strictly speaking denotes the territory on both sides of the river Rhine from the town of Bingen to the border with the Netherlands. The Rheinland people (the Rheinländer) enjoy merry celebrations at carnival time and during the grape harvesting. Rheinländer is also the name of a Polka-like dance. The composer L. van Beethoven, the physicist W. C. Röntgen and the surgeon F. Sauerbruch had their roots in the Rheinland.

The towns of Wismar and Rostock are important Baltic Sea ports. The poet F. Reuter, the archaeologist H. Schliemann and the sculptor and poet E. Barlach were born in Mecklenburg. Today Mecklenburg is part of the state of Mecklenburg-Vorpommern. Named on the occasion of the thousandth anniversary of Mecklenburg in 1995.

**(6129) Demokritos = 1989 RB<sub>2</sub>**

Discovered 1989 Sept. 4 by E. W. Elst at Haute Provence.

Named for the Greek philosopher Demokritos of Abdera (460–380 B.C.), well-known for his atomistic theory of matter. He was a pupil of Leukippos, to whom he owed many ideas. His great concern was to harmonize Ionic cosmology with Greek ontology, and he is credited with at least 57 works on ethics, physics, nature, mathematics and art. He considered an observation to be the result of an interaction between observer and observed.

**(6143) Pythagoras = 1993 JV**

Discovered 1993 May 14 by E. W. Elst at the European Southern Observatory.

Named for the great Greek philosopher and mathematician Pythagoras of Samos (580–500 B.C.). He contributed to the development of mathematics and is generally credited with the first mathematical foundation of theories about harmony in physics and the arts. Although it is difficult to distinguish his teaching from those of his disciples, Pythagorean principles strongly influenced the thought of Plato and to a somewhat lesser extent that of Aristotle. Citation written by D. Sinachopoulos at the request of the discoverer.

**(6152) Empedocles = 1989 GB<sub>3</sub>**

Discovered 1989 Apr. 3 by E. W. Elst at the European Southern Observatory.

Named for the Greek philosopher Empedocles (490–430 B.C.) Only some 400 lines remain of his poem *On Nature*, which considered that matter is composed of the four basic elements of fire, air, water and earth. Nothing comes into being or is destroyed, but things are merely transformed. Like Herakleitos he believed that two forces, love and hate, interact to bring together and to separate the four ingredients. Fewer than 100 verses are left of *Purifications*, another poem by Empedocles.

**(6186) Zenon = 1988 CC<sub>2</sub>**

Discovered 1988 Feb. 11 by E. W. Elst at the European Southern Observatory.

Named for the great Greek philosopher and mathematician Zenon of Elea (494–430 B.C.). As a friend and pupil of Parmenides, he continued his teacher’s abstract and analytic thought, taking the theses of his opponents and refuting them by *reductio ad absurdum*. He tried to show that the assumption of the existence of a plurality of things in time and space carried with it more serious inconsistencies. He is especially known for the paradoxes he used for this purpose. Citation by D. Sinachopoulos at the request of the discoverer.

**(6204) MacKenzie = 1981 JB<sub>3</sub>**

Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named in honor of Norman MacKenzie, a leading scholar of the poetry of Gerard Manley Hopkins. Professor of English at the University of Rhodesia from 1954 to 1964, he has subsequently been at Queen's University in Canada. His works include co-editing the fourth edition of Hopkins' *Poems* (1967) and most recently the Oxford English Texts *Poetical Works of Gerard Manley Hopkins* (1990). MacKenzie has followed Hopkins' close observation of nature, especially astronomy, and has maintained an active interest in the sky throughout his life. Name proposed and citation prepared by D. H. Levy.
